

# Electronics in Music

F.C Judd (1914-1992) was a pioneer in British electronic music, working in the 1950s and 1960s. His importance hinges on a wide range of electronic activities: from his compositions, self-built synthesizer and sound visualisation system to his books, magazine articles and radio broadcasts. He was a prime mover in disseminating electronic sounds and musique concrete to the public - not just encouraging them to listen, but also to experiment with tape recorders and tone generators. *Electronics In Music* was originally published in 1972 and describes the principles behind early electronic musical instruments and synthesised sound, including circuit diagrams. Published by Foruli Classics - dedicated to bringing the best out-of-print music and popular culture books back into print.
